

To the Federal Communications Commission,

I submit these comments :

- 1) Power Companies have an extremely poor record of addressing or correcting interference complaints with regards to the Amateur Radio Community.
- 2) BPL was soundly rejected in Japan for very good reasons.
- 3) Amateur Radio provides backup and in some cases, primary communications during disasters. Amateur Radio and Commercial H.F. suffer from varring conditions BPL would add much more interference to these conditions.
- 4) Many US Government agencies use the HF spectrum as well as amateurs BPL will interfere with their communications also.
- 5) Finally, the field measurement video from W1RFI, the ARRL's interference focal point, gives undisputable visual and auditory evidence that BPL would be disastrous to all forms of communication in all areas of the spectrum. Please don't degregate HF/VHF communications which are all too vital to national security and our day to day operations.

Thank you for your time.
